**Read and understand these instructions before starting any work!** 

USE THE PARTS LIST BELOW TO MAKE SURE YOUR KIT IS COMPLETE BEFORE INSTALLATION. IF ANY PIECES ARE MISSING, PLEASE CONTACT: Total Cost Involved Engineering 866-925-1101

## Front Suspension Installation Instructions

Thank you for choosing TCI Engineering New Coil spring front suspension package. This kit features our completely new upper spring towers that allow traditional shims/washers for alignment adjustments. This design eliminates the T-bolt design that was prone to slipping and throwing your alignment out when you hit pot holes. This new kit also features our new 7/8+ anti-sway bar which is stiffer than the <sup>3</sup>/<sub>4</sub>+previously offered.

#### New Coil-Spring Front End on Original Stock Chassis

## 1949-1954 Chevy Car Coil-Spring Front End Parts List -

	Part#: * 224-2354-0cp-c3k-1ex or 224-2354-0sm-a6k-4gx – The asterisk shown is the plain/standard package				
1	Coil-Spring Cross member	1	Rack & Pinion – Only		
			• Power Rack Part #: 304-3215-00 + 1 in.		
	• 1949-1954 Chevy Car Part #: 224-2356-00		• *Manual Rack Part #: 304-3205-00 + 1 in.		
2	Upper Control Arms	1	Rack & Pinion Bolt Kit – Hardware		
	• * Part #: 200-2257-00 . Plain		<ul> <li>Power Rack Part #: 300-3233-00</li> </ul>		
	• Part #: 200-2257-05 . Black		• *Manual Part #: 300-3231-00		
	• Part #: 200-2257-02 . Polished	1	Tie Rod Ends Set – Hardware		
2	Lower Control Arms		• Part #: 301-3238-00		
	• * Part #: 200-2257-00 . Coil-Spring - Plain	2	Assembled: Drop Spindle w/11+Rotors and Calipers BP: 4.5 Part# spasyspb11pad-gmn or BP: 4.75 spasyrpb10daf-gmp		
	<ul> <li>* Part #: 200-2257-05 . Coil-Spring - Black</li> </ul>	2	Sway Bar and Mount – Hardware		
	<ul> <li>Part #: 200-2257-02 . Coil-Spring - Polished</li> </ul>		<ul> <li>Part #: swaybar-f09-pln (BAR/PLAIN)</li> </ul>		
	• Part #: 200-2457-00 . Air Bag . Plain		<ul> <li>Part #: swaybar-f09-crm (BAR/CHROME)</li> </ul>		
	• Part #: 200-2457-05 . Air Bag - Black		Part #: swy-bar-mnt-032-pln		
	• Part #: 200-2457-02 . Air Bag - Polished		Part #: swy-bar-heims38mod - 3/8 Modified Heims		
	• Part #: 200-2557-00 . Coil-Over . Plain	]	Part #: swy-bar-bolt-01-pln		
	• Part #: 200-2557-05 . Coil-Over . Black	2	Coil Springs . 300# black powder coated Billet Coilovers - Part#: skbdy03-0		
	<ul> <li>Part #: 200-2557-02. Coil-Over. Polished</li> </ul>	2	Sway Bar and Mount . Hardware 3/8 Bolt Kit		
	•	2	Coil-Springs - Black Powder Coated - Part#: spring600b for coil over or springm300b for regular coil spring

# ~ New Coil-Spring Front End ~

#### Installing the cross member:

Holes #2 & #5 will have studs pre-installed onto the flat plates of the cross member. These studs will match up to pre-existing holes on the factory frame. This will position the cross member exactly where it needs to be.

**\*NOTE**\* Holes #1, #3 & #4 also have pre-existing holes matching on the factory frame but these will use a regular nut & bolt instead of a stud. Holes #6 & #7 will have to be drilled through the frame.

# 49-54 CHEVY CAR COIL SPRING

off the towers where they come up against the side of the frame to achieve the proper measurement. As a reference, install the shock onto the lower control arm and pull the shock shaft through the upper spring tower hole. The shock shaft should line up directly with the

hole in the cone when everything is correct.

Once proper placement of the spring towers have been confirmed place a couple tack welds at the top and the side of the tower/frame.

Double check all measurements.

Now the spring towers can be welded in place.

## Coil Spring Installation Helpful Hints For Installing Springs

We suggest that you wait until final vehicle assembly(vehicle at full weight) to install the coil springs because it will put undue stress on the ball joints and could cause the boots to tear. Another option is to remove the upper and lower ball joint boots and then cover the ball joints to keep dirt out until you@re ready to drive the vehicle.

## For Proper Installation of Coil Springs <u>A Spring Compressor is needed</u>

Here are some helpful hints for installing the springs without a spring compressor.					
Installing the coil springs onto the front end	Additional Components Needed:				
Before you Start:	Very strong ratcheting tie downs with hooks				
*NOTE* It is best to use a spring compressor for	Floor Jacks				
this process. If you do not have a spring	Clean Towel				
compressor this is an affective way to install your					
coil springs.					
<ol> <li>(Image A) With the vehicle securely positioned on jack stands remove the grease fitting on the lower ball joint. Install the coil spring with the flat ground side up in the spring pocket and the pig tail end inserted onto the notched portion on the lower a- arm. Use a long screwdriver or flat bar inserted above the last coil and hooked through the coil pocket to hold the spring from coming out as you jack up the a-arm.</li> <li>(Image B) Position the floor jack under the lower</li> </ol>	<ol> <li>(Image C) Hook the ratcheting tie down to the front of the floor jack cross bar, then go up and over the upper a-arm mounting bracket. With the other end of the tie down hooked to the other side of the jack crossbar. This keeps the frame from going up as you raise the a-arm.</li> <li>(Image D) Slowly raise the jack until it is safe to remove the large screwdriver holding the spring in place. Keep raising the jack until the lower a-arm is high enough to fit the shock absorber into place.</li> </ol>				
a-arm as shown with a clean towel protecting the finish.					

	5. (Image F) Install the shock through the bottom of the
	lower a-arm with the shock stem going through the mounting hole in the upper hat. Align the lower shock
	sleeve with the shock bosses on the lower a-arm and install the 7/16+shock bolt and tighten
	Note: If you have difficulty with the sleeve fitting between
	the bosses lightly sand the ends of the sleeve.
<b>G</b> .	6. (Image E)Install the cup washers, bushings and nut on
	top of the shock stem and tighten. Carefully lower the jack
	and remove the ratchet tie down. Re-install your ball joint grease fittings. <b>(Image G)</b> This is what your installed
	spring will look like.
	The spring that comes with the kit is a 300 lb. per inch
	rate and is identified with a green dot on the flat end.
	Installing the upper control arms:
	Use four of the provided .090+thick washers between the tower and the control arm shaft on each
	bolt. The rest can be placed under the head of each
	bolt and under the lock nut. These spacers may need to be moved around when final alignment is
	performed. Once all the hardware is in place go
	ahead and set the bolts in the center of alignment
	slots and tighten down.
	The slotted arm mount holes will make it easy to add
	in extra positive caster for power rack applications.
	Installing the spindle assemblies:
	Disce the opinglic opto the lower hell is intervity the
	Place the spindle onto the lower ball joint with the steering arm facing forward with the large I/D tie rod
	end taper facing down.(The tie rod end goes up into
	the spindle)
	Place the ball joint washer first and then the castle
	nut. Torque the lower ball joint to 90 ft. lbs and
	install the cotter pin. The lower ball joint is a <b>MOOG K719</b>

17 3/4 in. Full Extended

11 3/4 in.

14 3/4 in. Rack Centered

**Full Retracted** 

Pull the upper control arm down onto the spindle. Place the ball joint washer first and then the castle nut. Torque the lower ball joint to 70 ft. lbs and install the cotter pin. The upper ball joint is a **MOOG K772** 

\*NOTE\* Caliper Fittings: GM Calipers = 10mm x 1.5 Wilwood Calipers = 1/8+NPT

#### Centering the rack assembly:

The rack needs to be centered to allow equal steering left to right. On a bench, turn the pinion out to lock one way. Measure from a convenient point to the end of the inner tie rod. (This rack was 17 <sup>3</sup>/<sub>4</sub>). Turn the pinion of the opposite lock position and measure from the same point to the end of the same tie rod (11 <sup>3</sup>/<sub>4</sub>). 17 <sup>3</sup>/<sub>4</sub> minus 11 <sup>3</sup>/<sub>4</sub> = 6. Divided by 2 = 3 Add that number to the smallest measurement (11 <sup>3</sup>/<sub>4</sub>++ 3+= 14 <sup>3</sup>/<sub>4</sub>+) and turn the pinion back till you get that measurement and your rack is centered.

### Installing the rack and pinion:

Place the rack on the cross member brackets as shown. Use the supplied 5/8 hardware to fasten it into place. The picture shows a power rack that requires a 5/8+spacer between the rack and the mounting brackets. A manual rack bolts directly to the mounting brackets not needing these brackets.

Torque bolts to 90 ft. lbs

\*NOTE\* Power Rack & Pinion fittings: 9/16+18 Pressure side & 5/8+18 Return side

Install the jam nut and outer tie rod end onto both sides of the rack. With the rotors pointing straight ahead(0 toe) install the tie rod ends into the bottom of the steering arm. Torque the tie rod end to 60 ft. Ibs. and install the cotter pin. <b>*NOTE* Rack &amp; Pinion output shaft:</b> Manual rack = 9/16+26 spline Power rack = <sup>3</sup> / <sub>4</sub> +36 Spline
Installing the anti-sway bar: Slide the lock ring collar over the bar on each side first. The split bushings go over the bar and then the aluminum blocks slide on over the bushings.
The anti-sway bar mounts to the rear of the cross member below the lower control arm pins. Use the supplied hardware to install the aluminum blocks onto the cross member. Torque to 35 ft lbs. Center the anti-sway bar and lock down the set screws against the bushings.
The sway bar routes from behind the cross member under the control arms and hooks up to the front of the control arms. Use the supplied hardware to install the heim joints with the male on the bottom. *NOTE* You can adjust the preload(or lack thereof) once the vehicle is ready to be driven. Disconnect one heim, place driver in the drivercs seat, adjust the loose heim until it goes onto the anti-sway bar with zero load.

## **Alignment specifications**

Caster: Power rack 4-6 degrees positive Manual rack 2-4 degrees positive Camber: 0 Degree

**Toe-in:** 1/32 to 1/16 inch

After 500-1000 miles the front springs will begin to break in. The lower control arms should be level to the ground or within a degree or two. You can now perform the final alignment. If the vehicle is still too high after 1000 miles it may be necessary to cut some of the coil off. Never cut more than a ¼ coil off at a time.

## AXLE STUD SIZES:

4.5+Bolt circle rotors =  $\frac{1}{2}$ +x20( $\frac{7}{7}$ 5- $\frac{60}{7}$  Ford Granada) 4.75+Bolt circle rotors = 12mmx1.5( $\frac{62}{7}$ Camaro) ALL Wilwood hubs = 7/16+x20

No returns or exchanges without an RMA#. Packages must be inspected upon receipt & be reported within 10 days. If you are missing parts from your kit, TCI Engineering will send the missing parts via FedEx or U.S. mail ground. Returned packages are subject to inspection before replacement/refund is given (Some items will be subject to a 15% restocking fee)

Thank you for your business!
